EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2027	5.97
Fiitjee Junior College	Class XII (Board of Intermediate Education, Andhra Pradesh (BIEAP))	2023	94.20%
SRI VANI T.M. AND E.M. HIGH SCHOOL	Class X (Board of Secondary Education, Andhra Pradesh (BSEAP))	2021	100.00%

SKILLS

LangGraph,LangChain,ML,PyTorch,Docker,MySql,Python,MCP,Ubuntu,DL

RELEVANT EXPERIENCE

Ai Engineer Intern

SDG3 Healthcare Private Limited

- Worked with different models and trained and fine tunned then for anemia detection
- Worked with high risk pregnancy project built hybrid model of Random Forest and XG Boost

Data Science & Analyst Intern

FutureInterns

- Built a social-media trend-analysis pipeline by scraping and processing data in Python (Tweepy, BeautifulSoup, TextBlob) and visualizing insights in Power BI.
- Analyzed customer support tickets using Pandas and NLTK to identify recurring issue patterns, and created a road-accident dashboard in Power BI and Excel to map high-risk zones and severity trends.

PROJECTS

AI Investment Platform

- Built an agentic analysis pipeline to evaluate stocks and mutual funds, automating claim extraction, financial data verification, and risk assessment using asynchronous Celery/Redis workers to prevent API blocking.
- Designed a modular MCP server architecture (Web Search, Financial Data, Document RAG, Math) with LLM fallback routing, and containerized the full stack with Docker Compose for repeatable deployment.

Drowsiness Detection System

- Developed a real-time driver alertness monitoring system combining MediaPipe facial landmarks (Eye Aspect Ratio) with a CNN eye-state classifier (~98% test accuracy on the MRL Eye Dataset) to reduce single-signal false alarms.
- Improved model robustness through data augmentation and hyperparameter tuning, achieving real-time inference on a standard webcam with configurable audio alerts.

Credit Card Fraud Detection Pipeline

- Built an end-to-end fraud detection pipeline on the Kaggle credit card dataset, applying undersampling,featurnormalization, and StratifiedKFold cross-validation with RandomizedSearchCV to handle severe class imbalance.

- Evaluated model performance using confusion matrix and ROC curve analysis, integrated SHAP for prediction explainability, and deployed an interactive Streamlit web app accepting PCA features (V1-V28) and normalized transaction amounts for real-time inference.

Exam Study Planner

- Built a full-stack study planner with a scheduling engine that dynamically adjusts task difficulty, allocates study blocks across subjects, and auto-reschedules missed or early-finished sessions.
- Optimized remote PostgreSQL database performance by replacing sequential N+1 queries with batched queries, and validated scheduling workflows locally with feedback from a pilot user group.
