EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2028	9.00
SN Trusts Central School	Class XII (CBSE)	2023	94.60%
SN Trusts Central School	Class X (CBSE)	2021	96.20%

WORK EXPERIENCE

Data Analyst(in-plant trainee), Daimler India Commercial Vehicles

-Used proprietary company software to aggregate failed part data and analyzed truck warranty claims using Microsoft Excel (Pivot Tables, Timelines, and charts) to identify failure trends, component wise claim frequencies, and warranty costs across vehicle aggregates.

-Developed data driven dashboards and PowerPoint reports with color coded visualizations, enabling effective tracking of underperforming components and supporting data driven warranty management decisions.

SCHOLASTIC ACHIEVEMENTS

Optiver Trade-a-thon: Came in the top 100 among all participants in IITH

LeetCode: Solved 400+ coding problems on data structures and algorithms.

SKILLS

Programming Languages and Libraries:C/C++,Python(Numpy, Pandas, Pytorch, Matplotlib, Scikit-learn)

Tools: SolidEdge(CAD),MS Office Suite(Excel,Word,Powerpoint)

Developer Tools: Git, GitHub, Jupyter Notebook, VS Code, Hugging Face

Domains: Machine Learning, Deep Learning, Data Science, Natural Language Processing, Large Language Models, Retrieval Augmented Generation ,DSA,OOP

RELEVANT COURSES

Programming and Mathematics Courses: Introduction to Programming,Multivariable Calculus, Elementary Linear Algebra, Differential Equations, Introduction to Probability, Introduction to Statistics, Complex Numbers, Transform Techniques

Online Courses: Machine Learning Specialization (DeepLearning.AI and Stanford University),CS50P (Harvard University)

PROJECTS

Parkinson's Disease Predictor(Tech Stack: Python, Scikit-learn, XGBoost, Pandas, NumPy, Streamlit, Joblib.)**:**

Developed and deployed a Streamlit web application for Parkinson's disease prediction using biomedical voice measurements, building an end to end ML pipeline with feature engineering, PowerTransformer based skewness correction, ColumnTransformer preprocessing, and feature scaling. Optimized SVC, Random Forest, XGBoost, and Logistic Regression using GridSearchCV with stratified cross-validation, evaluated Soft Voting and Stacking ensembles, and achieved 94.87% test accuracy with a Soft Voting ensemble for real time inference.

Retrieval Augmented Legal AI Assistant

- Developed a fully local Legal AI Assistant by implementing the Llama 3.2 transformer inference architecture from scratch in PyTorch using pretrained instruction tuned weights.
- Implemented core transformer components including Grouped Query Attention (GQA), Rotary Positional Embeddings (RoPE), RMSNorm, SiLU feed forward networks, causal self attention, and autoregressive text generation.
- Designed and implemented an end to end Retrieval Augmented Generation (RAG) pipeline featuring semantic document chunking, BGE embeddings, FAISS vector indexing, cosine similarity retrieval, prompt engineering, and grounded response generation.
- Built a semantic legal knowledge base containing 18+ major Indian statutes, enabling accurate retrieval based legal question answering without relying on external APIs or cloud hosted language models.
- Designed a modular pipeline separating document retrieval, vector indexing, transformer inference, and prompt generation, enabling easy integration of additional legal documents and future system enhancements.

Tech Stack: Python, PyTorch, FAISS, Sentence Transformers, tiktoken, LangChain

Financial News Intelligence Pipeline

-Developed an end to end NLP pipeline that transforms unstructured financial news into structured datasets by extracting named entities, classifying corporate events, and performing financial sentiment analysis.

-Integrated GLiNER for Named Entity Recognition, ModernBERT for zero-shot corporate event classification, and FinBERT for financial sentiment analysis to generate structured article level metadata.

-Implemented company name normalization and aggregation to build a company centric knowledge base containing mention counts, event frequencies, sentiment distributions, article references, and co-occuring companies.

-Automated generation of structured JSON outputs and corpus level analytics report summarizing company mentions, corporate event distributions, and overall sentiment trends.

Tech Stack: Python, Hugging Face Transformers, GLiNER, ModernBERT, FinBERT, PyYAML

POSITIONS OF RESPONSIBILITY

Office of Career Services: Internship Coordinator

Aelous Racing: Part of the Management Team
