Kandari Shree Varshith

ma23btech11014@iith.ac.in | shreevarshithk@gmail.com | +91 6281273001 | LinkedIn | GitHub

EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2027	6.50
SR Junior College, Hanamkonda	Class XII (Telangana State Board, TSBIE)	2023	96.50%
Shine High school, Warangal	Class X (Board of Secondary Education)	2021	10.00%

SCHOLASTIC ACHIEVEMENTS

Kishore Vaigyanik Protsahan Yojana scholar in **SA stream**

Cybercon: secured **4th** in CTF competition(by Cybersecurity club of IITH)

SKILLS

Proficiency: Python, C, C++, SQL

Technical Skills: LaTeX, OOP, Error-handling, Documentation

Dev Tools: GitHub, LaTeX, Conda, VS Code

Soft Skills: Communication, Collaboration

PROJECTS

Neural Network Digit Recognition(as part of MA2233**)***:*

Built a neural network from scratch for MNIST digit recognition, implementing all algorithmic steps manually. Tuned architecture and hyperparameters, resulting in strong digit classification performance(97.28% accuracy). Gained deep algorithmic understanding and practical machine learning expertise

https://github.com/Lazykiddo1/Neural-Network-for-Digit-Recognition

Statistical Analysis of Olympic Medal Counts(as part of MA2570**):**

- Analyzed Paris 2024 Olympic medal data to identify patterns across countries using descriptive statistics (mean, variance, IQR).
- Created visualizations (bar charts, histograms, box plots) to explore medal distribution and trends.
- Applied the Central Limit Theorem through Python simulations to validate sampling assumptions.
- Examined correlations between medal counts and factors like GDP, population, and HDI using scatter plots and correlation coefficients.

https://github.com/Lazykiddo1/Statistical-Analysis-of-Olympic-Medal-Counts

Statistical Analysis and Parameter Estimation(as part of MA2570):

- Estimated Gamma distribution parameters for Olympic medal counts using both Method of Moments and Maximum Likelihood Estimation (MLE), and constructed confidence intervals to quantify uncertainty.
- Assessed mean calorie intake differences between genders using nutrition data and performed hypothesis tests to determine statistical significance in intake patterns.
- Conducted hypothesis testing on India's cricket win rates, evaluating outcomes with formal statistical procedures.
- Applied the Central Limit Theorem to support validity of sampling approaches across datasets

https://github.com/Lazykiddo1/Statistical-Analysis-and-Parameter-Estimation

Cultural Norm vs. Generic Fact Classifier(as part of AI3703)

- Developed an NLP pipeline to classify statements as cultural norms or universal facts using a balanced dataset curated from CultureBank and SNLI/MNLI, implementing advanced regex sanitization to remove lexical and punctuation biases.
- Fine-tuned BERT-family transformer models, diagnosing context-blindness failures and successfully pivoting to a Zero-Shot NLI entailment architecture that achieved an 87.5% evaluation accuracy.
- Architected a Retrieval-Augmented Generation (RAG) framework using FAISS and 4-bit quantized LLaMA 3 / GPT-4o-mini, leveraging Few-Shot Chain-of-Thought (CoT) prompting to dynamically retrieve sociological context and improve edge-case reasoning.

https://github.com/Lazykiddo1/Norm-Classifier

RELEVENT COURSES

Mathematics: Introduction to Number theory, Combinatorics and Graph theory, Convex optimization, Linear Algebra, Probability, Applied Statistics, Transform Techniques, Real Analysis, Predictive Modelling, Spectral Graph Theory

Computer Science: Data Structures and Applications, Algorithms, DBMS I, Compilers I, Theory of Computation, Operating Systems I, Approximation Algorithms

Artificial Intelligence: Convex Optimization, Fundamentals of Machine Learning, Natural Language Processing

EXTRACURRICULAR

Student Volunteer, National Service Scheme (NSS): Actively participated in community welfare initiatives, campus blood donation camps, educational outreach, and plantation drives.
