EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2028	8.73
City International School, Wanowrie	Class XII (CBSE)	2024	95.20%
Amanora School, Pune	Class X (CBSE)	2022	97.80%

WORK EXPERIENCE

AI & Cloud Engineering Intern | FxBytes Technologies Pvt. Ltd. | *May 2026 - Jun 2026*

- Completed a 2-month learning-focused internship in AI, cloud computing, and cloud-native application development.
- Built a multi-agent AI job search platform using CrewAI, LangChain, Google Gemini, Python, and Streamlit.
- Learned containerization and Kubernetes by deploying a full-stack application using Docker, Ruby on Rails, and PostgreSQL.
- Gained hands-on exposure to cloud-native development, DevOps workflows, and modern AI application architectures.

Product Operations Associate (Part-time) | DealStore.io (now Driffle) | *Aug 2020 - Aug 2021*

- Managed product listings and inventory updates for a growing gaming e-commerce platform using WordPress and collaborated with the team to streamline day-to-day product operations.
- Ensured high-quality customer-facing content through proofreading and quality assurance and moderated the Discord community and supported customer engagement.

PROJECTS

Athena - AI-Powered Football Decision Intelligence Platform

- Engineered **"Evidence-Before-AI"** platform processing **13M+ on-ball events** across **22,000+ players** (StatsBomb Open Data) via a **SQL/DuckDB warehouse**, computing hundreds of advanced metrics and similarity scores.
- Built a custom retrieval engine combining **entity graph traversal and RAG** to power an AI analyst that **cites deterministic evidence** for every response, eliminating hallucination risk in decision-critical outputs.
- Shipped as a production-grade system with **Dockerized deployment**, **CI/CD**, and **230+ automated tests**.

Meridian Retail Growth Platform

- Architected a product intelligence platform on the UCI Online Retail dataset (400K+ transactions, 4.3K customers) to identify lifecycle growth opportunities using segmentation, churn prediction, and LTV modeling.
- Designed the Decision Impact Framework, translating analytics into quantified business cases, identifying £83K activation and £61K retention opportunities through scenario-based impact modeling.
- Built an interactive Streamlit decision workspace for live scenario comparison and initiative prioritization, refining dashboard structure and metric selection through reviews with PM and consulting peers.

Cycle -- Privacy-First Period & Menstrual Cycle Tracker

- Built a medically grounded cycle prediction engine using the luteal phase constant method, validated against Chiazze 1968 and Clue/Bull 2019 datasets, with standard deviation confidence scoring that widens fertile windows and flags irregular cycles.
- Implemented a RAG powered personalised chatbot that retrieves user cycle history and symptom logs, detects phase specific symptom patterns, injects structured personal context into the LLM system prompt for data grounded responses.
- Analysed 24,000 synthetic cycles and 675,000+ symptom logs calibrated to research to validate algorithm assumptions, compute population benchmarks, and surface phase specific symptom prevalence through an in app Insights page.
- Designed database privacy using Supabase Row Level Security, scoping user data by owner with zero third party sharing.

Deployed a Full Stack Web Application over Kubernetes

- Built and deployed a cloud-native **Ruby on Rails** application using **Kubernetes, Docker, PostgreSQL, Docker Hub, and ConfigMaps**, following a microservices architecture with separate frontend and database services.
- Orchestrated containerized deployments using Kubernetes Deployments, Services, LoadBalancer, and persistent storage, enabling scalable application management and service discovery.

SKILLS

Programming: Python, SQL, C++, C, HTML, CSS, Prompt Engineering (Claude Code & Antigravity)

Cloud: AWS (EC2, S3, IAM, VPC, Lambda, ECS, ECR, CloudFormation), Docker, Kubernetes, Git

AI/ML Competencies: Machine Learning, Feature Engineering, Explainable AI (SHAP), Retrieval Augmented Generation (RAG), LLM Integration, Similarity Search, Model Evaluation, Prompt Engineering for Agentic Workflows

Data & Analytics: Pandas, NumPy, Scikit-learn, DuckDB, Data Engineering (ETL), Power BI, Exploratory Data Analysis

Product & Design: User Research, Structured Problem-Solving, Wireframing/Prototyping, REST APIs, Design Principles, Cross-Functional Collaboration, Stakeholder Communication, Product Strategy

Tools: Git/GitHub, React, Streamlit, Microsoft Excel, Microsoft PowerPoint, Microsoft Word, LaTeX, Wordpress

POSITIONS OF RESPONSIBILITY

Finance & Partnership Coordinator | TEDx IIT Hyderabad

- Negotiated and secured **5,00,000 in sponsorship funding** from **2 partner organisations**, independently managing sponsor relationships end-to-end from initial outreach through to final delivery on event day.
- Managed **10+ vendors** on the day of the event alongside **end-to-end financial planning and budget allocation**.

Core Member | Blockspace, Blockchain and Crypto Club at IIT Hyderabad

- Spearheaded blockchain focused workshops, technical sessions, and educational initiatives covering blockchain architecture, DeFi, smart contracts, cryptocurrencies, and decentralized applications, driving Web3 awareness and learning across campus.

Ideation Coordinator | Finance & Consulting Club IIT Hyderabad

- Coordinated with **5+ industry speakers** for Horizon, IT's annual fest, overseeing **end-to-end execution** for the consulting vertical to a successful delivery to **5k+ attendees,** while also launching open consulting and **product management projects** campus-wide to expand hands-on experience beyond the club's core cohort.
- Led the Ideation domain by developing and organizing more than **15+ end-to-end events**, driving creative initiatives from concept to execution while collaborating with **cross-functional teams** to ensure successful delivery.
