EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2028	7.68
Rajiv Gandhi Academy of E-learning School & Jr college of science,Pune	Class XII (Maharashtra State Board)	2024	83.17%
Sri.Arundhati Arun Padhye English medium school, Devrukh	Class X (Maharashtra State Board)	2022	98.60%

TECHNICAL SKILLS

Languages: C,C++ | **Core CS**: Data Structures & Algorithms, OOP, DBMS, SQL, Computer Science Fundamentals

Tools : Git, GitHub, VS Code

Strengths : Problem Solving, Debugging, Time & Space Optimization

PROJECTS

Real-Time Collaborative Whiteboard :

Technologies Used: C++, Node.js, WebSockets, Socket.io

Description:

- Developed a collaborative digital whiteboard application allowing multiple concurrent users to draw and interact in real time.
- Implemented low-latency bi-directional communication using WebSockets to synchronize drawing states across all active client sessions.
- Engineered efficient event-handling and state-management mechanisms to ensure a seamless, lag-free user experience during simultaneous inputs.
- **GitHub Repository:** https://github.com/ch24btech11027-sketch/Real-time-Whiteboard

Lossless File Compressor :

Technologies Used: C++ (Standard Template Library)

Description:

- Engineered a high-performance lossless file compression and decompression utility based on the Huffman Coding algorithm.
- Leveraged core C++ data structures, including priority queues, binary trees, and frequency hash maps, to generate optimal prefix codes for data encoding.
- Successfully reduced file sizes while ensuring strict 100% data integrity and accuracy during the file reconstruction phase.
- **GitHub Repository:** https://github.com/ch24btech11027-sketch/Lossless-File-Compressor

Mini-LLM-Gateway :

- **Engineered a centralized, high-performance LLM proxy architecture**, standardizing client-side integration across diverse model providers while ensuring system high availability through dynamic load balancing and automated failover routing.
- **Developed custom security and governance middleware pipelines**, implementing secure API key authentication, granular traffic throttling, and comprehensive token-usage telemetry to safeguard backend infrastructure and audit system-wide resource consumption.

Mini Chatbot :

Technologies Used: Python, Google Gemini API

Description:

- Engineered an interactive AI chatbot application leveraging the Google Gemini API to process natural language input and generate highly coherent, context-aware responses.
- Implemented robust API integration to harness advanced Large Language Model (LLM) capabilities, simulating fluid and intelligent conversational interactions.
- Successfully streamlined the prompt and response processing pipeline to ensure low-latency replies and a seamless user experience.
- **GitHub Repository:** https://github.com/Tanmay007-07/mini-chatbot

Production-Level LLM API :

Technologies Used: Python, Ollama

Description:

- Designed and deployed a robust, production-ready API architecture to serve Large Language Models locally using Ollama, ensuring high throughput and reduced latency.
- Implemented structured endpoints for efficient prompt handling, integrating comprehensive error management and validation for seamless communication with client-side applications.
- Engineered a scalable pipeline capable of processing concurrent inference requests, maintaining reliable performance and strict data privacy by running AI models entirely on-device.
- **GitHub Repository:** https://github.com/Tanmay007-07/Production-Level-LLM-API

POSITIONS OF RESPONSIBILITY

Coordinator, Operations | FCC IITH (2025 - 2026)

- Directed end-to-end event logistics and optimized resource allocation, ensuring the seamless execution of all club initiatives.
- Streamlined operational workflows and coordinated cross-functional teams, effectively resolving real-time bottlenecks during events.

Sub-Coordinator, PR & Marketing | TEDx (2024 - 2025)

- Co-directed targeted promotional campaigns and executed public relations strategies, significantly expanding event outreach and audience engagement.
- Facilitated campus-wide outreach initiatives and collaborated with student organizations to maximize event visibility and community participation.

TECHNICAL PROFICIENCY

- **Languages & Core Competencies**: C++, SQL, Object-Oriented Programming (OOP), Database Management Systems (DBMS),Computer Science Fundamentals.
- **Algorithmic Problem Solving**: Solved 400+ problems across different platforms, implementing advanced concepts such as dynamic programming, graph theory, trees, and greedy algorithms.
- **Competitive Programming**: Architected highly optimized C++ solutions prioritizing strict time and space complexities; rigorously tested algorithms against edge cases under stringent contest constraints.
