EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2028	7.16
Sri Chaitanya Junior Kalasala Kondapur, Ranga Reddy District	Class XII (Telangana State Board of Intermediate Education)	2024	98.70%
Sri Chaitanya Techno School Hydernagar, Medchal District	Class X (Board of Secondary Education, Telangana)	2022	10.00%

PROJECTS

Publisher Monetization -- Product Management Case Study

- Mapped the **8-stage** publisher monetization journey and coded **12 verified public reports**, identifying friction across support, reporting, payments and account issues, translating the evidence into a leading hypothesis around issue-resolution visibility.
- Defined product strategy for an issue-resolution layer, establishing status visibility, next-step ownership and structured help as core requirements, informed by a comparison of Media.net's public experience with Google AdSense's documented payment and policy-resolution flows.
- Prioritized the issue-resolution opportunity using evidence strength and cross-cutting applicability, defining successful issue-resolution rate as the primary metric and establishing validation criteria to determine whether to pursue the concept or shift toward decision support.

Zomato Global Restaurant Market Analysis | PostgreSQL, Power BI

- Analyzed **9,500+** restaurants across **141 cities** using **SQL** (**CTEs**, **window functions**, **CASE logic**) to classify restaurants into decision-ready segments like **Hidden Gem** and **Overpriced Underperformer**, applying DENSE_RANK/ROW_NUMBER to find the top-rated restaurant per price bracket
- Evaluated the relationship between online delivery and customer ratings, finding **delivery-enabled** restaurants averaged a lower rating of **3.38** compared to **3.47** for **non-delivery** restaurants
- Built a **3-page Power BI dashboard** revealing **Gurgaon** had higher delivery penetration (**38%**) than **Delhi** (**27%**) despite a smaller restaurant base (889 vs. 4,047) -- suggesting execution quality may play a larger role than market size when prioritizing delivery investment

Telecom Customer Churn Analysis | Pandas, Matplotlib, Seaborn

- Investigated churn across **33 variables** for **7,043 customers** by building reusable **Python functions** to measure churn rates for **15 business attributes**, prioritizing high-impact analyses
- Cleaned missing values based on business meaning rather than uniform imputation, keeping churn calculations consistent with underlying data
- Identified **four major churn drivers** -- **month-to-month contracts**, **fiber-optic internet**, **electronic-check payments**, **short tenure** -- and synthesized findings into a **high-risk customer profile** with targeted retention actions to inform a prioritized intervention strategy

Scam Message Detection | Python, scikit-learn, NLP

- Built a text classification pipeline on 965 labeled SMS messages (~16% spam) using stratified train/test splitting and class weighting (class_weight='balanced') to address class imbalance and prioritize detection of the minority spam class
- Engineered TF-IDF features from raw message text using a 3,000-word vocabulary and benchmarked Multinomial Naive Bayes against Logistic Regression, with Logistic Regression improving spam recall from 58% to 81% and F1 from 0.73 to 0.86
- Identified key spam indicators through EDA and Logistic Regression coefficient analysis -- terms like "free," "claim," and "prize" carried the strongest positive weight toward spam -- then analyzed false negatives to characterize the subtler messages that word-frequency features alone failed to catch, informing where future feature engineering (e.g., n-grams) would add the most value

SKILLS

Analytical - SQL, Python, Excel, Pandas, NumPy, Data Analysis, Descriptive Statistics, Hypothesis Testing, Regression & Correlation Analysis, Machine Learning, Supervised & Unsupervised Learning, Classification, Clustering, Feature Engineering, Model Evaluation, Data Structures & Algorithms

Technical - C, scikit-learn, OpenCV, Image Processing, HOG, CNNs, Image Classification, Image Labeling & Mask Generation, Power BI, IBM Cognos Analytics, Matplotlib, Seaborn, Prompt Engineering, PowerPoint, Word, Canva

Product & Business - Product Strategy, Data-Driven Decision Making, Market/Strategic Analysis, Product Prioritization, Business Case Development, Problem Solving, Stakeholder Engagement, Structured Communication, Cross-Functional Coordination, Resource Allocation & Trade-off Decision-Making, Leadership

POSITIONS OF RESPONSIBILITY

Hospitality Head | Diesta, IIT Hyderabad

- Directed hospitality and cross-team operations across **10+ games** and **8** competing department teams, delegating responsibilities among co-heads to ensure seamless operational support for participating teams.
- Partnered with the production team to manage artist and guest logistics during Pronights, driving execution of large-scale events with **4,000+ student footfall**.

Events & Competitions Manager | E-Cell, IIT Hyderabad

- Facilitated the launch of Startup Studio, matching **12 industry mentors** with **12 startups** for an intensive **90-day cohort** culminating in Fetching Fortunes.
- Directed stakeholder engagement and event logistics, coordinating participation for **200+ students** across **10+ colleges** in Hyderabad throughout the cohort and final showcase.

Hospitality Coordinator | 58th Inter IIT Sports Meet 2025, IIT Hyderabad

- Led end-to-end accommodation and hospitality logistics for **2,500+ athletes** across **23 IITs**, overseeing room allocations and real-time operations throughout the **40-day** national sports meet.
- Coordinated tournament operations for **5,000 participants** across **158+ matches** in **17 sports**, managing a **21-person** team while aligning venue, medical and logistics units.
- Cut incident resolution time to under 15 minutes during peak-load days through dynamic resource reallocation, delivering a zero-complaint record across accommodation, dining and medical services.

SCHOLASTIC ACHIEVEMENTS

American Express Campus Challenge 2026 (Strategy Track) | Team -- Built a deterministic profitability model (Revenue - Cost - Risk) on 500K unlabeled records, deriving weights from stated card terms and industry benchmarks; Round 1 score: 0.912.

Accenture Innovation Challenge 2026 | Team -- Proposed InsightNarrator, an AI-powered KPI storytelling engine using statistical thresholding (1.8-2 SD) to flag anomalies and cross-referencing structured + unstructured data for root-cause narratives, compressing a 2-5 day/15-20 hour analyst process into seconds; shortlisted for Round 2.
