Tools: Visual Studio, VS Code, Unity(2D & 3D), MySQL, Power BI, MS Excel.

Soft Skills: Communication, Networking, Leadership, Team management, Event management, Decision making, Problem solving.

PROJECTS

IPL Analytics Dashboard:

- Built and iteratively shipped an end-to-end IPL analytics dashboard from a raw Excel dataset to a fully interactive web app, independently owning requirements, data processing, and UI across 10+ feature cycles.
- Engineered data pipelines in Python (pandas) to derive accurate metrics from granular data and resolved entity-inconsistencies so aggregates reflected accurate real-world groupings.
- Validated outputs against official published sources at each step, catching and correcting a flawed computed metric before shipping, using automated testing to verify feature correctness pre-release.

ControlPlane.ai:

An AI observability platform for monitoring LLM performance, cost, quality, and safety.

- Worked on the **AI performance monitoring module**, helping track response latency, token usage, and estimated costs across LLM workflows.
- Designed and implemented **dashboard components** to present AI performance metrics and make workflow issues easier to identify.
- Developed the **workflow visualization interface**, allowing users to view individual steps and understand where delays occur in an AI pipeline.
- Contributed to **AI quality monitoring**, helping surface factuality and response-quality insights through the platform.

Stella Victor:

A procedurally generated decision based space themed 2D top down RPG game.

- Developed a **2D action game in Unity** using **C#**, implementing player movement, combat, enemy interactions, and gameplay systems.
- Built and integrated **enemy and boss animation systems** using Unity Animator Controllers and state-based animations for attacks, movement, damage, and death.
- Implemented a structured **gameplay architecture** for handling player-enemy interactions, combat states, and progression across gameplay scenes.
- Integrated Unity's **Input System, Cinemachine, Universal Render Pipeline (URP), Timeline, and Post-Processing** to support responsive controls, camera behavior, rendering, and gameplay presentation.

WORK EXPERIENCE

Business Developer & Public Relations Intern | FinStocks AI:

- Drove product distribution and channel marketing across social media and online communities, increasing average daily website clicks by 200% and new signups by 300%.
- Engaged directly with users to resolve product queries, collect feedback, and identify improvement areas, translating user insights into actionable product changes.
- Collaborated with the technical team to introduce Templates and an in-product Blogs section, improving product discoverability and helping new users understand key features.
- Identified and implemented removal of mandatory signup, enabling users to try the product frictionlessly and increasing user retention from 15% to 40%.
- Executed SEO and content marketing through Medium, social media, Reddit, and relevant communities, making Finstocks AI a trending topic across major Indian stock-market communities.
