EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2027	8.02
Chhatrapati Shahu Vidyalaya and Junior College, Kolhapur	Class XII (Maharashtra State Board of Secondary and Higher Secondary Education)	2023	89.17%
Chhatrapati Shahu Vidyalaya, Kolhapur	Class X (Central Board of Secondary Education)	2021	95.60%

EXPERIENCE

Oracle

Software Engineering Intern

Hyderabad, India

- Architected the **T1800 On-Call Assistant** using **Slack Socket Mode**, automating production-incident context gathering and accelerating first-response triage for on-call engineers.
- Engineered an **Oracle Database retrieval pipeline** combining exact-match, fuzzy, and semantic search to reliably map incoming alerts to **approved, production-safe runbook documentation**.
- Built an **AI-native triage layer with Codex** that synthesized raw runbook and Jira evidence into concise, actionable Slack guides, with strict prompt-grounding controls to prevent unsupported recommendations in production.
- Developed a **persistent, shift-aware session manager** that scoped AI context to active on-call rotations and automatically generated handoff summaries covering recurring incident patterns, open tasks, and unresolved context across shifts.
- Integrated **Ocean and Jira APIs** to automate incident telemetry extraction, alert acknowledgement, and active-engineer tagging directly within Slack incident threads, reducing manual operational overhead.

PROJECTS

Vehicle Rental System

- Co-developed an online portal using MySQL to enable end-to-end online management of vehicle rentals.
- Implemented features for checking real-time availability, making reservations and viewing transaction details.
- Integrated admin tools for fleet management, managing customer records and dynamic pricing adjustments.

NatVenture | Campground Review Platform

- Github | Demo
- Technologies: HTML, CSS, JavaScript, MongoDB, Node.js, Express.js
- Developed a full-stack campground review web application enabling authenticated users to post, review, and comment on campgrounds, ensuring a seamless login experience.
- Implemented personalized user profiles with secure CRUD operations for managing listings and feedback, ensuring controlled and personalized interactions.

LOKUSQuant | DSL for Quantitative Trading

- Developed the semantic-analysis engine for a quantitative trading DSL, enabling static validation of time-series, technical indicators, market regimes, portfolio state, and trading signals.
- Implemented type inference, hierarchical symbol resolution, scope/immutability enforcement, and compile-time validation for quantitative expressions, including time-series indexing, numeric operations, regime logic, and function signatures.
- Integrated the validated trading language with LLVM MLIR, lowering typed expressions, memory operations, function calls, and control flow into an intermediate representation for downstream code generation.

SKILLS

Languages: C, C++, JavaScript, Python, SQL (MySQL), HTML, CSS

Frameworks and Libraries: Node.js, Express.js, MongoDB

Developer Tools: Git, GitHub, LaTeX

Soft Skills: Communication, Time Management, Teamwork, Leadership, Problem Solving

SCHOLASTIC ACHIEVEMENTS

- Completed **600+** DSA problems across LeetCode and GeeksForGeeks
- Practiced **420+ problems** on Competitive Programming platforms (Codeforces and CodeChef)
- Secured a **rank of 119** in MHT-CET 2023, with **99.93 %ile**
- **NTSE Scholar**, awarded by NCERT

RELEVANT COURSES

Computer Science: Data Structures & Algorithms, Software Development Fundamentals, Object Oriented Programming, Database Management Systems

Maths: Probabilty, Statistics, Linear Algebra
