EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2027	8.99
National High School , Kolkata , West Bengal	Class XII (CBSE)	2023	91.80%
National High School , Kolkata , West Bengal	Class X (CBSE)	2021	90.80%

WORK EXPERIENCE

Software Developer Intern, 360 Technology (US-based Tech Consultancy) | Remote **June 2026- July 2026**

- **Contributed** to **MeetingMind**, an **AI-powered Microsoft Teams meeting assistant** automating **meeting capture, transcription, speaker attribution, summaries**, and **action-item extraction.**
- Developed a **modular AI pipeline** for meeting scheduling, transcription, speaker mapping, and audio processing.
- Implemented **speaker identification** using **Whisper, PyAnnote, and Human-in-the-Loop verification** for persistent voice enrollment.
- Designed a **PostgreSQL database** and integrated **asynchronous FastAPI APIs** for meeting and speaker management.
- Built a **React-based dashboard** for meeting management, member onboarding, speaker review, workflow monitoring.

AI Training Specialist, Outlier AI | Remote **Apr 2026- May 2026**

- Optimized **AI-generated C++ and Python code** to ensure **algorithmic efficiency and edge case correctness.**
- Diagnosed **AI hallucinations and logical flaws** , delivering detailed analytical reports to guide **model fine-tuning**.

SCHOLASTIC ACHIEVEMENTS

- Cleared **online assessments** and **multiple interview rounds** to secure **internship offers** from **Morgan Stanley** and **Oracle** through **on-campus recruitment.**
- Solved **1500+** DSA and competitive programming problems across LeetCode (**Knight**: **1900+** rating), GeeksforGeeks, CodeForces (**Pupil**: **1350+** rating) and CodeChef (**1628** rating).
- Achieved global rank of **297** in CodeChef Starters 192 and **576** in LeetCode Biweekly Contest 185

PROJECTS

IITH Complaints Website (Group Project) | *Next.js, Firebase, Firestore* Website GitHub

- **Designed** to support **500+** hostellers in **logging** and **tracking 20+ hostel facility-related** complaints, automating complaint routing and status notifications to relevant authorities.
- Applied **Google OAuth2.0 authentication with Firebase**, supporting **200+** monthly login events.
- **Automated 100% of complaint notifications** to **relevant authorities** using Google Apps Script, mapping complaint types to the appropriate authority and **centralizing** complaint reporting into a **single platform**.

AI Quiz Engine | *React, Node.js, Python, Apache Kafka, Redis, MongoDB* Website GitHub

- **Architected** a **distributed microservices Quiz platform** deploying across 2 cloud platforms for high availability allowing users to dynamically **generate, attempt quizzes** and **view community leaderboards** for custom topics.
- **Engineered** a centralized **Redis** layer for **LRU caching** and **IP-based rate limiting**, optimizing expensive **LLM API** costs and safeguarding the **API gateway** against request flooding.
- **Developed** an **asynchronous Python worker** to process **Kafka streams**, integrating the **Gemini API** to dynamically generate and store structured **JSON quizzes** in **MongoDB**.

Crowdfunding Website for Digital Creators | *Next.js, Node.js, Express, MongoDB* GitHub

- **Engineered a full-stack monetization platform** enabling **200+ digital creators** to accept direct **micro-donations**, **manage custom subscription tiers**, and **track earnings** via a centralized dashboard.
- Architected **Auth.js** authentication and session management with secure user authentication and authorization.
- Integrated **Razorpay Payment Gateway** automating **payment verification** and transaction handling.

SafeDialog | *Python, DistilBERT, Hugging Face Transformers, Streamlit* GitHub

- **Built** an **Intent-Aware Pipeline (IAP)** by integrating **Groq LLM** to infer **speaker intent** and **influence dynamics** before manipulation classification.
- **Fine-tuned DistilBERT** for **multi-task manipulation detection** jointly performing **binary** and **multi-label classification** of manipulation techniques and psychological vulnerabilities.
- **Integrated** the **fine tuned-model** into a **Streamlit Application** enabling real-time **text/TXT/PDF analysis.**

Producer-Consumer Problem using Semaphores and Locks GitHub

- **Implemented a C++** solution to the classic **Producer-Consumer problem** using semaphores and locks, with **configurable thread counts** and **buffer sizes** via runtime parameters.
- **Demonstrates** proficiency in **concurrent programming** by ensuring **thread-safe operations** and efficient resource management across any input configuration.

SKILLS

- **Languages**: C++, Python, JavaScript, SQL
- **Frameworks/Libraries**: React.js, Next.js, Express.js Node.js, Matplotlib, Pandas, Numpy, Pytorch, TensorFlow
- **Concepts**: Operating Systems, Machine Learning, Deep Learning, Data Structures and Algorithms, Object-Oriented Programming, Database Management System (DBMS).

RELEVANT COURSEWORK

- **Computer Science & AI**: Introduction to Programming, Data Structures & Applications, Operating Systems, Fundamentals of Machine Learning and Deep Learning, Numerical Methods and Computing.
