EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2027	8.80
Sri Chaithanya Junior College	Class XII (Telangana State Board of Intermediate Education)	2019	95.00%
Narayana Olympiad School	Class X (Telangana Board of Secondary Education)	2017	9.70%

WORK EXPERIENCE

Target | *Engineer* | 21 *Aug 2023 - 11 July 2025*

Post Purchase & Returns Web Team (1.5 years)

- Developed and maintained the Order Details and Returns experiences on Target.com, including new feature development, bug fixes, cross-team integration testing, API migrations, and on-call support during peak season
- Built the front-end for major new features, including In-Store Order Exchange, a new capability letting guests exchange an online or in-store pickup order in the store
- For Target's Ontology Team, Built a web application enabling reviewers to accept, reject, or suggest changes to AI-generated product attributes and descriptions, including the admin workflow for assigning products to reviewers

Discretionary Journey Team (0.5 years)

- Requested by a manager familiar with my work on Post-Purchase to join this new team improving the shopping experience for discretionary categories, closely followed by the Digital org's director given its strategic priority.
- Built the Compare feature on the Search Listing Page and redesigned the product review form across 2 new variants, resolving accessibility challenges and migrating legacy API endpoints the web platform had fallen behind on.

- Collaborated closely with Design, Accessibility, and iOS/Android teams throughout, aligning on evolving requirements and maintaining consistent, accessible experiences across platforms

PROJECTS

Customer Churn Prediction

- Built and tuned an XGBoost model to **0.848 ROC-AUC** on the IBM Telco churn dataset, outperforming a Logistic Regression baseline across all key evaluation metrics
- Used SHAP to generate per-customer explanations of churn risk, deployed via a FastAPI backend and React frontend for real-time risk exploration

RAG-Based Claim Verification System

- Built a RAG pipeline that uses NER to identify the correct Wikipedia article for a claim, then applies section-aware retrieval to narrow the search to the most relevant part of that article
- Generated four-way verdicts (True / False / Misleading / Unknown) with citation verification that independently checks LLM-generated quotes against retrieved evidence, catching hallucinations and enforcing correct abstention.
- Deployed via a FastAPI backend and React frontend

PUBLICATIONS

Comparative Deep Network Analysis of Speech Emotion Recognition Models using Data Augmentation

2022 International Conference on Disruptive Technologies for Multi-Disciplinary Research and Applications

- Developed and comparatively evaluated 5 deep learning architectures for speech emotion recognition using the MELD dataset
- Addressed class imbalance in the training data through targeted augmentation, pushing the best-performing model to 92% accuracy

Automatic Correction of Speech Recognized Mathematical Equations using Encoder-Decoder Attention Model

2022 IEEE 19th India Council International Conference (INDICON)

- Developed an encoder-decoder attention model to automatically correct grammatical, spelling, and phonetic errors that speech recognition systems introduce when transcribing spoken mathematical equations.
- Reduced Word Error Rate and Character Error Rate in ASR transcriptions of spoken equations, enabling more reliable voice-based tools for math education and accessibility

RESEARCH EXPERIENCE

Research Member, Data Driven Intelligence Lab, IIT Hyderabad

Under the supervision of Dr. Konda Reddy Mopuri | June 2026 - Present

- Working on *"Grounded Findings Generation for Open-Set Brain MRI Abnormalities,"* combining abnormality localization with clinical finding generation to describe cases outside the training distribution.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frontend/Backend: React, Next.js, HTML, CSS, FastAPI

ML/DL Frameworks: PyTorch, TensorFlow, Keras, Scikit-learn, XGBoost, HuggingFace Transformers

Data & Visualization: NumPy, Pandas, Matplotlib, Seaborn

Tools: Git, GitHub, VS Code

SCHOLASTIC ACHIEVEMENTS

- Ranked 6th among 72 students in B.Tech., graduating with Distinction
- Awarded a 50% merit-based scholarship for sustained academic performance during B.Tech.
- One of the first authors of 2 peer-reviewed papers published at IEEE conferences -- INDICON 2022 and CENTCON 2022

RELEVANT COURSES

Deep Learning, Foundations of Machine Learning, Visual Computing, Topics in Optimization, Linear Algebra, Probability and Stochastic Processes, Advanced Data Structures and Algorithms
