EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2026	7.03
Anglo Urdu Boys' High School and Junior College	Class XII (Maharashtra State Board)	2022	84.33%
R. R. Vidyalaya Jalgaon	Class X (Maharashtra State Board)	2020	94.40%

POSITIONS OF RESPONSIBILITY

Electronika Lecture Series

Actively participated in the lecture series conducted by Electronika, gaining hands-on experience with microcontrollers and embedded systems.

Elan and nVision

Volunteered during the Pro Show at Elan & nVision, contributing to the event coordination, crowd management, and smooth execution of the event.

SKILLS

Languages: C, C++, Python, Javascript, MATLAB, Verilog

Web Development: HTML, CSS, Javascript

Core CS: Data Structure and Algorithms, Object-Oriented Programming (OOP)

Tools: Git, Github, Visual Studio Code

RELEVANT COURSES

Computer Science Courses: Introduction to Programming, Introduction to AI, Introduction to Modern AI, Data Structures and Algorithm, Machine Learning, Deep Learning(Ongoing)

Mathematics Courses: Calculus, Differential Equations, Vector Calculus, Probability and Random Processes, Matrix Theory, Complex Variables, Statistical Inference

Electrical Core Courses: Circuit Network Analysis, Electronic Devices and Circuits Lab, Signal and Systems, Digital Systems, Semiconductor Device Fundamentals, Control Systems, Digital Signal Processing, Analog Electronics

PROJECTS

Income Predictor using Machine Learning

- Built an ML classification pipeline for predicting income >50k or <50k using the UCI Adult Census dataset.
- Performed data cleaning, label encoding, feature processing and undersampling and evaluated Logistic Regression, Random Forest, Gradient Boosting and SVM.
- Achieved 82.45% accuracy and 83.35% F1-score using Gradient Boosting and deployed the model through a Tkinter GUI for real time prediction.

FlowSplit - Expense & Settlement Manager

- Built a responsive expense management web application using HTML, CSS, and Javascript with dynamic DOM

manipulation for real-time expense and balance updates.
- Solved multiuser debt settlement using custom min heap and max heap data structures, minimizing the number of transactions to settle balances.
- Handled dynamic user expense and balance calculation using Javascript, enabling automated equal splitting and settlement tracking.

Pathfinder - Dijkstra's Algorithm Visualizer

- Developed and interactive shortest path visualizer using HTML, CSS and Javascript with grid-based rendering and DOM manipulation.
- Solved shortest path visualization on weighted grids by implementing Dijkstra's Algorithm with support for walls and weighted terrains.
- Implemented Javascript event handling and asynchronous animations to provide draggable nodes, interactive grids, and user-controlled visualization speed.

Maze Generator and Solver

- Built an interactive maze generator and solving application using HTML, CSS and Javascript with dynamic grid generation and DOM manipulation.
- Solved maze generation using Recursive backtracking, dynamically creating randomized mazes for different grid sizes.
- Implemented BFS for shortest-path solving for with animated traversal, using Javascript to visualize visited cells in the final path.

EXTRACURRICULAR

- NSS volunteer actively participated in community service initiatives.
- More than 120 hours of community service.
- Participated in institute tournaments in athletics.
