PROJECTS

Molecular Dynamics Simulation of Human CaV1.2 Calcium Ion Channel

- Currently investigating the structural dynamics and ion permeation mechanism of the human CaV1.2 voltage-gated calcium channel using molecular dynamics (MD) simulations, with a focus on channel conformational changes and the effects of mutations and pharmaceutical compounds.

Development of a Paper-Based Biosensor for Detection of Cow's Milk Allergens

S.R.M. Institute of Science and Technology

- Developed a low-cost, portable paper-based biosensor for rapid detection of cow's milk allergens, primarily casein.

- Designed and fabricated the diagnostic device using colorimetric analysis for rapid, on-site detection.
