EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2027	8.51
Narayana Junior College	Class XII (TSBIE)	2023	94.90%
St Joseph's School	Class X (ICSE)	2021	96.60%

SCHOLASTIC ACHIEVEMENTS

Selected as **1 of 12** students nationwide to **represent India** in the JENESYS Science & Technology Exchange Program in Japan.

EXPERIENCE

Machine Learning Intern, ServiceNow

- Designed an **unsupervised drift detection system** that flags model degradation before ground-truth labels arrive, replacing fixed retraining schedules with data-driven triggers; deployed for an enterprise client.
- **Cut retraining compute by 70%** by moving from weekly scheduled retraining to drift-triggered retraining, while **improving accuracy by 4-5%**.
- **Validated the detector** by injecting multiple drift types into labeled data and confirming that flagged drift corresponded to real performance drops.
- Built an **alert-only buffering mechanism** that delays retraining until enough ground truth accumulates, preventing premature and repeated triggers.
- **Benchmarked EBM vs XGBoost** on training time, inference latency, and explainability across public and internal datasets, showing EBM as a faster, natively interpretable option for local explanations.
- Researched and validated **anomaly-detection metrics for agentic AI systems** using the Galileo framework and academic literature.

POSITIONS OF RESPONSIBILITY

Machine Learning Core - Robotix Club

Conducted sessions for 100+ students and guided ML-based robotics projects, emphasizing real-world problem solving and hands-on implementation.

Internship Coordinator - Office of Career Services (OCS)

Pitched to 30+ companies to onboard internship opportunities for students across departments

PROJECTS

ERP Course Scheduler *(Coursework BM2043 , Prof Nagarajan Ganapathy)*

- This was a group project under the *Data Structures and Algorithms Lab* course where we created an ERP system for Biomedical Engineering - IIT Hyderabad using C++ and applied the principles of Object-Oriented Programming.
- Optimized adjacency list construction and Kahn's topological sort to cut planning time from seconds to **under 50ms.**
- Implemented bucket based specialization filters and dynamic credit tracking across **50+ BME courses**, with cycle detection to ensure **100% conflict free** schedules.

Intelligent Email Automation Agent

- Built an **AI email agent** that classifies incoming emails, schedules calendar events, and drafts context-aware replies, automating multi-step inbox workflows end to end.
- Modeled the workflow as a **LangGraph state machine** with conditional branching, so each email routes through the right steps (classify, extract details, schedule, draft) based on its content.
- Added a **human-in-the-loop approval step** before any reply is sent or event is created, and documented each

node's logic to keep the system reliable and easy to debug

Predictive Modeling for Customer Offer Redemption

- Developed a **LightGBM** ranking model to predict customer offer redemption by processing and integrating multiple large-scale datasets with over **700,000 data** points, including customer transactions, advertising interactions,offer data.
- Engineered over **300 predictive features**, capturing historical user behavior and temporal patterns to significantly improve model accuracy.
- Implemented a robust **GroupKFold** cross-validation and used **Optuna** for automated hyperparameter tuning, resulting in a highly generalized and accurate model.
- Built and validated an end-to-end machine learning pipeline in Python to rank and deliver personalized offer recommendations.

SKILLS

Languages : C/C++ , Python , SQL , Verilog

Frameworks : Tensorflow , Keras , PyTorch, ROS

Libraries : STL **,** OpenCV , Pandas , NumPy , Scikit Learn, Seaborn ,Matplotlib

Tools : Git , GitHub , Docker, Google Colab , Jupyter , VS Code

Concepts: DBMS , OOPS , Computer Networks , OS.

Machine learning and AI , Data Structures and Algorithms

RELEVANT COURSES

Data Structures and Applications, Data Structures and Algorithms Lab ,Foundations of Natural Intelligence , Introduction to Programming, Artificial Intelligence

Calculus I, Calculus II, Linear Algebra, Statistics, Probability and Random Processes

EXTRACURRICULAR

Selected among the only **2 teams** from IIT Hyderabad for nation level **Smart India Hackathon** 2024.
