EDUCATION

Institution	Degree / Board	Passing Year	Score / CGPA
Indian Institute of Technology Hyderabad	B.Tech	2043	6.63
Delhi Public School,Jhunjhunu	Class XII (CBSE)	2022	86.60%
Delhi Public School,Jhunjhunu	Class X (CBSE)	2020	89.20%

SCHOLASTIC ACHIEVEMENTS

Jee Mains(B.Tech) 2023-94.61 percentile

Jee Mains (B.Planning)-Air 157

Jee Advanced 2023-Air 12136

SKILLS

Technical Skills: SQL,PYTHON, MS Office, Excel, Powerpoint, Product Management, Guesstimates

Soft Skills: Management, Interpersonal Communication, Teamwork, Adaptability, Leadership, Analytical and Critical Thinking, Problem Solving

POSITIONS OF RESPONSIBILITY

Operations Head, Finance and Consulting Club, IITH;

- Leading a major domain of a three-tier team consisting of 130+ undergrads and postgrads, coordinating a series of sessions and an active consulting services wing fostering Finance, Consulting, Quant and Product Management community at IITH.
- Playing a key role in the planning and execution of Horizon, the annual flagship event, the largest such in southern India, hosting 20+ industry experts with various panel discussions, keynote speech and several competitions.
- Promoted to this position after the last tenure as Operations Coordinator for exceptional work during the tenure.

Volunteer at OCS

- Helped OCS in conducting Internship and Placement Exams and Interview

PROJECTS

Netflix Content Analytics with SQL(link of project)

- Developed and executed complex **SQL queries** to analyze over 8,000 Netflix titles, focusing on **data cleaning**, **aggregation**, and **trend identification** across genres and countries.
- Designed and implemented optimized database schemas to structure and normalize raw Netflix data for faster and more accurate analysis.
- Solved **15 business case problems** using advanced SQL techniques such as window functions, subqueries, and joins to extract meaningful insights.
- Generated **analytical insights** on regional content trends, genre popularity shifts, and Netflix's evolving production strategy to support data-driven decisions.

User Performance Analytics using SQL (link of Project)

- Conducted in-depth analysis of user submission data to identify trends and performance patterns using SQL.
- Leveraged analytical SQL functions (COUNT, AVG, SUM, EXTRACT, DENSE_RANK) to generate key insights and user metrics.
- Optimized query performance through efficient data filtering, grouping, and ranking techniques.
- Prepared data-driven performance dashboards and reports to support decision-making and user behavior evaluation.

Inventory Management CLI *[GitHub link]*

- Designed and implemented a normalized relational database schema (5 tables) with foreign keys, check constraints, and indexes to model suppliers, products, customers, and orders
- Built SQLite triggers to enforce business rules at the database level -- automatic stock deduction on sale and prevention of negative inventory
- Implemented transactional order processing in Python, ensuring multi-item orders either fully commit or fully roll back on failure (no partial/corrupted data)
- Wrote parameterized SQL queries throughout to prevent SQL injection, plus JOIN/GROUP BY-based reports (low-stock alerts, order history)

Sales Analytics Toolkit *[GitHub link]*

- Built an end-to-end analytics pipeline (synthetic data generation ETL SQL analysis visualization) on a normalized 4-table schema with ~1,400 rows of transactional data
- Wrote advanced SQL using **CTEs and window functions** (RANK(), NTILE(), ROW_NUMBER() OVER (PARTITION BY...), running totals) to answer business questions -- top products, monthly revenue trends, and customer spend segmentation -- directly in the database rather than in application code
- Used pandas to consume query results and matplotlib to generate visual reports (revenue trend, category breakdown, top-seller rankings)
- Validated query correctness with unit tests against hand-computed datasets, and set up GitHub Actions CI to run them on every push
